CONTROL

Custom Design?
No Problem.

We know that no two control rooms are alike. That's why if our standard offerings don't quite work for your requirements we will work with you to create the ideal solution.

With over 30 years of experience in designing control oom furniture we have the know-how to effectively manage your project.

Adaptable **Upgradeable**

Technology Desking offer a wide range of technology housing solutions meaning we always have the console to meet your needs.

For more information about the options available please speak to a member of our sales team.
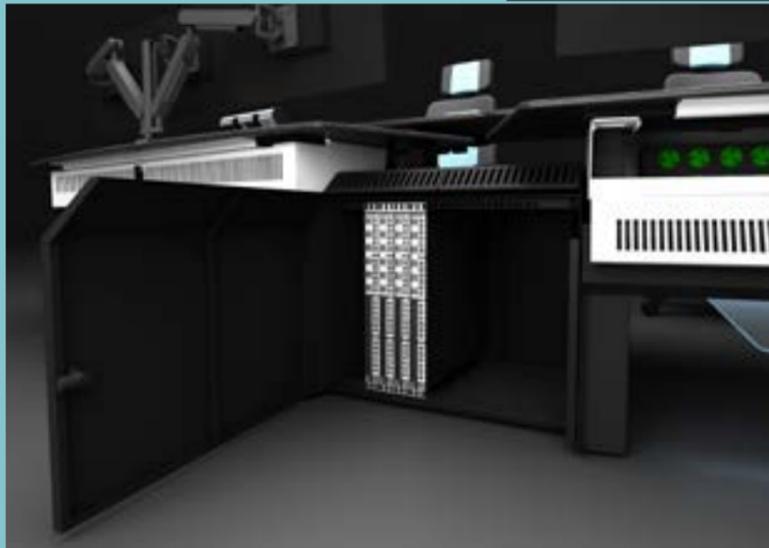

Control Consoles

One Frame.
Multiple Applications.

Our standard control room desk frame offers wide adaptability to meet the 24 hour needs of a variety of control room environments.
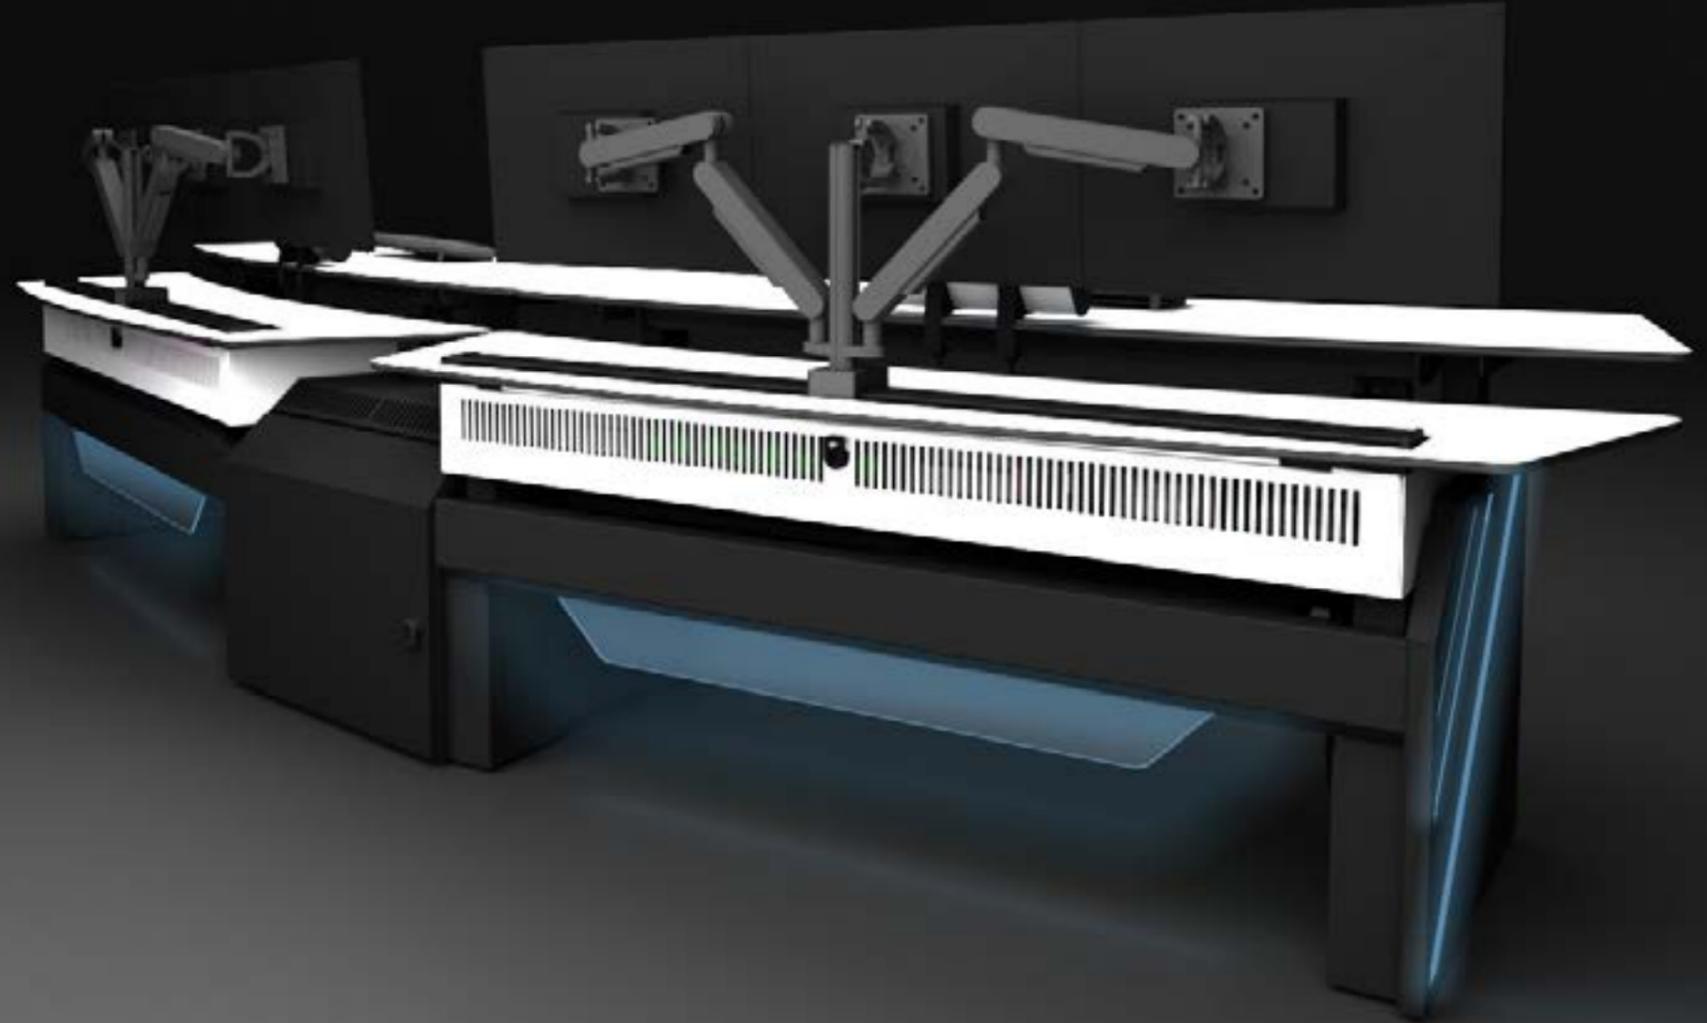

Fully ergonmically compliant and offering a range of IT management solutions the Control Console range offers a uniformed aesthetic across all your critical environments.
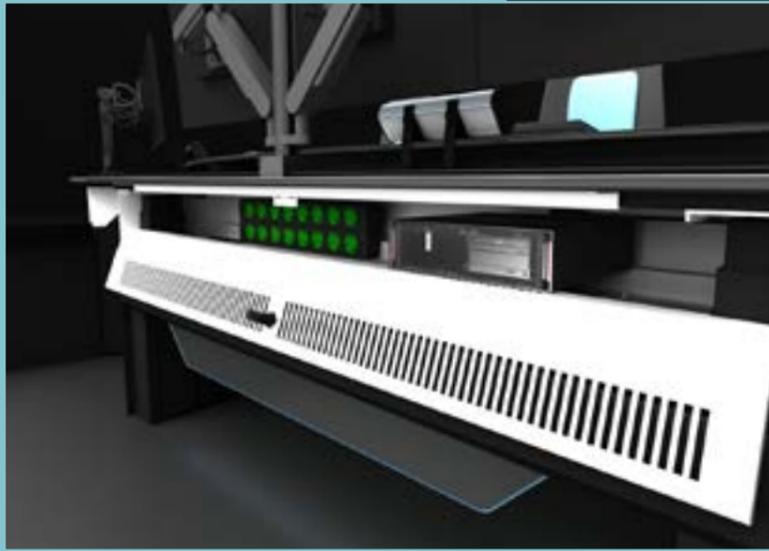

A

B

Evolving Technology.
Requirements Met.

Each user position has the capacity to house upto 2 small form factor PC's locally as well as options for power/ data/remote processor mounting.

In addition, for larger equipent including 19" rack mounting, housings can be added inbetween desk frames.

Rear access prevents disruption to users in a 24 hour environment.

A   Dynamic technology enclosure for small equipment and power at each user position.

B   Large techology enclosure between user positions can accomodate larger PC's and 19" rack mounting.

Height Adjustment:
Modern Technology.
Premium Functionality.

A   Dual electric height adjustment.

B   Single electric height adjustment.

In a 24 hour environment a height adjustable desk gives the controller the oppurtunity to regularly change their position while still maintaining full focus. Our desks meet BS EN 527:1 and BS EN ISO 11064-4 ergonomic standards.

Optional dual height adjustable worksurfaces also enable the monitors to be adjusted independently to increase the viewing range within the room.

We utilise the very best in height adjustment technology, both in quality and functionality. Our trading desks boast an adjustment range of 660mm and lower movement noise when compared with market alternatives.

We offer a range of controller styles, from basic up/down controls to advanced LED paddles incorporating Bluetooth connectivity and programmable heights.

Control Room Design.
To Your Specification.
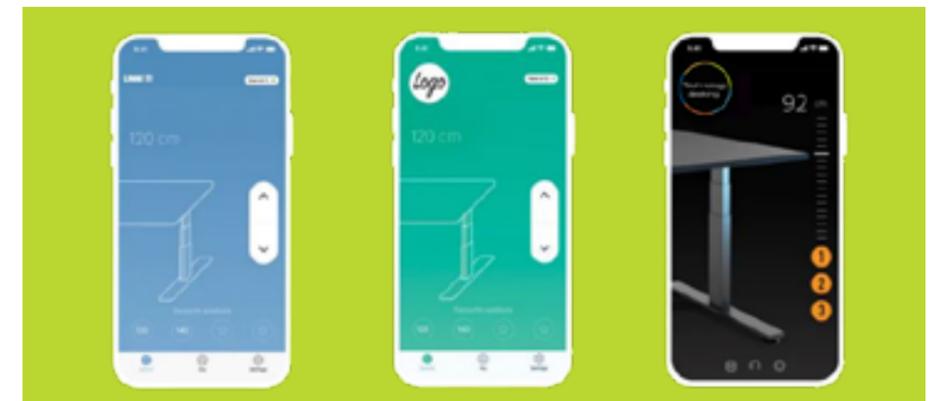

Many control centre operations require the operator to be constantly monitering vast amounts of infromation on a bank of monitors.

The number of monitors needed for this function is often the driver in specifying the right control room console for your business needs.

We offer a range of curved consoles which facilitate the requirement for multiple monitors while maintaining optimal viewing distances. All of which are costomisable on a project-by-project basis
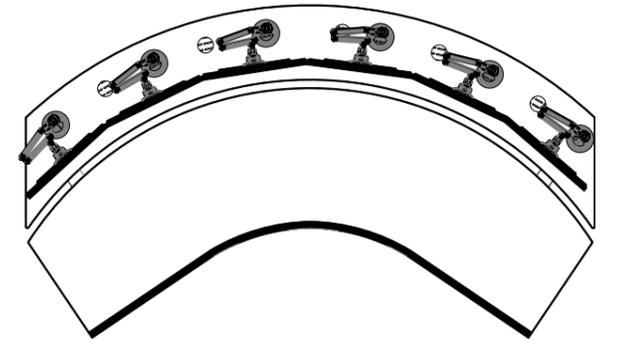

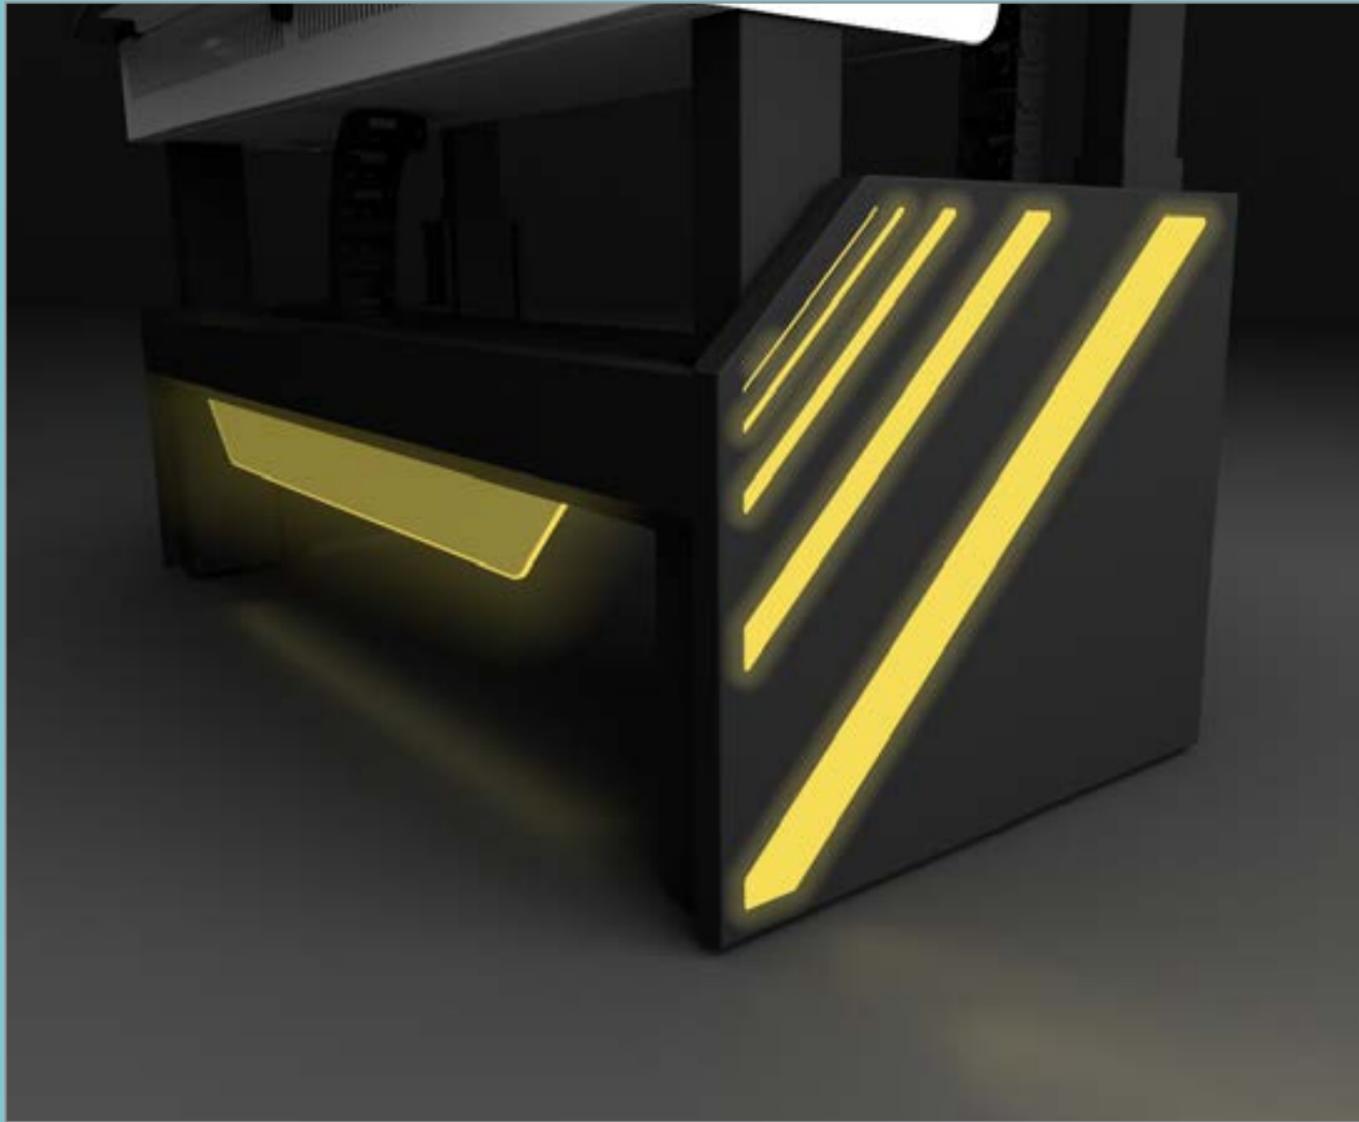

Often dimly lit control rooms require a level of ambient lighting and task lights for users. Lighting can be incorperated ino the desk frame and end panelling of our control consoles either as white, RGB or a combination of both. Temperature settings can be pre specified while the whole system can be integrated into your Building Management System.

Customisable panels are available for corperate branding and task lights can be added to desktop level to aid focussed work.

Monitor Arms - SmartArm.

Fully Adjustable, Multi-tier Mounting.

SmartArm is our flat panel monitor mounting system, featuring quick and easy monitor removal, fine height adjustment and complete flexibility.

The system is designed to meet changing monitor specifications and configurations, allowing for either landscape or portrait orientation. Extensions can be added with no disruption to existing monitors.

Our monitor arms offer the perfect solution for layouts with multiple screens.
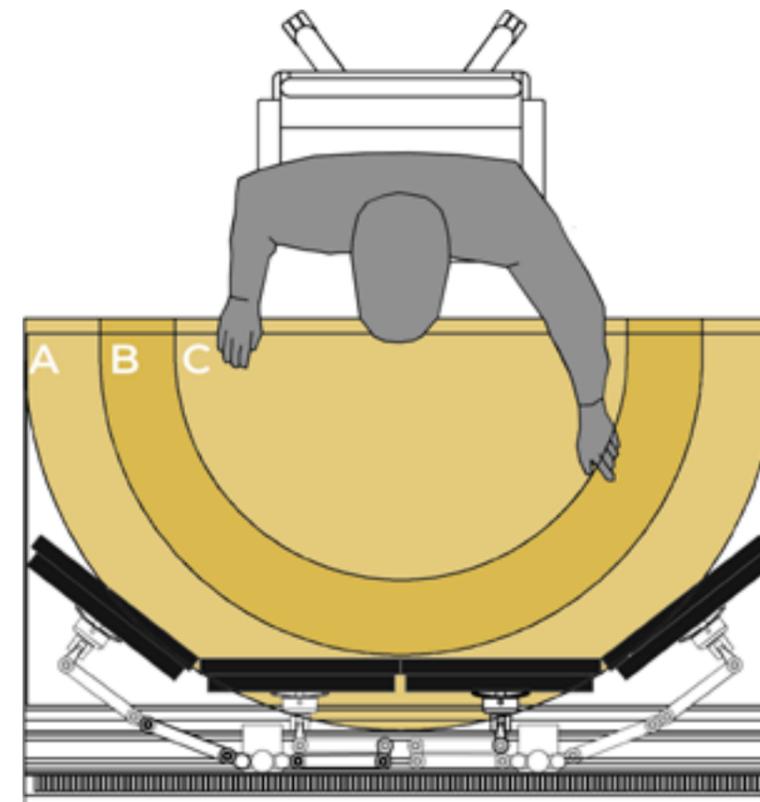

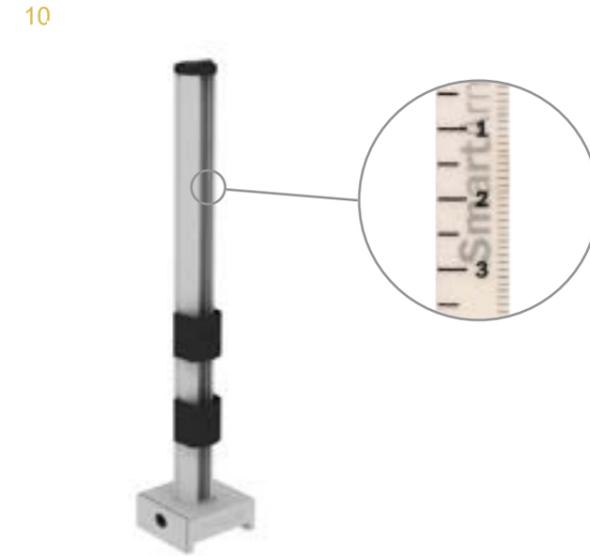

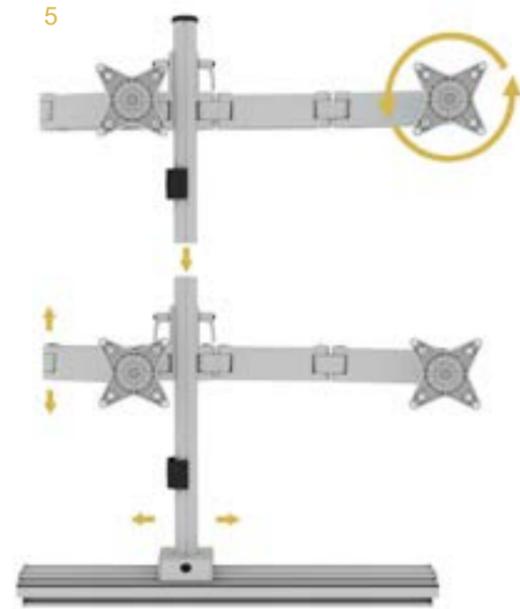

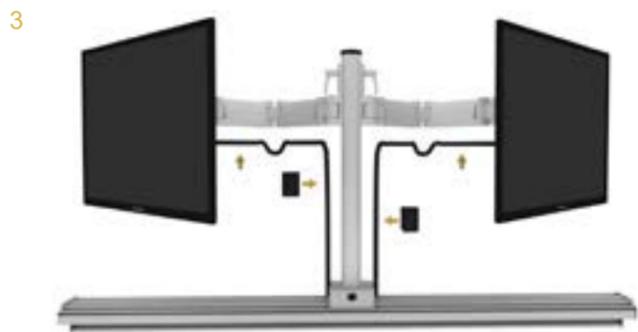

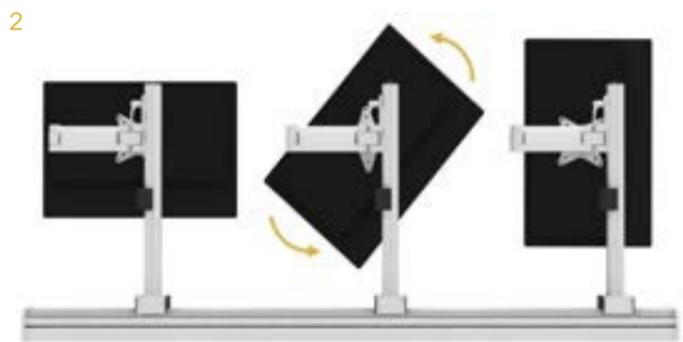

1. Fine height adjustment and locking slide bracket.

2. Quick release VESA hub for tilt and swivel monitor movements.

3. Concealed cable management.

4. Arms are configured for maximum adjustability.

5. Reconfigurable system enables you to add and take arms on day two.

6. Monitor rail, through grommet or desk edge clamp mounting options.

7. No link arm

8. One link arm.

9. Two link arm.

10. Integrated ruler so heights can be set to match.

11. Choice of three colours; silver, black and white.

A. Maximum viewing distance: 750mm

B. Optimal viewing distance: 600mm

C. Minimum viewing distance: 450mm

Monitor Arms - ZPX.

Endless Possibilities .

The tension sprung Zgo monitor arm provides complete flexibility for the modern control centre. Wth ZPX arms can be configured as up to 6 with one mounting pole, including options for mounting laptops and tablets.

A modular design with fully incorporated cable management coupled with a wide range of colour options and customisable magnetic panels ensure that ZPX can adapt to meet the varying needs of your room while always fitting in with your business identity.
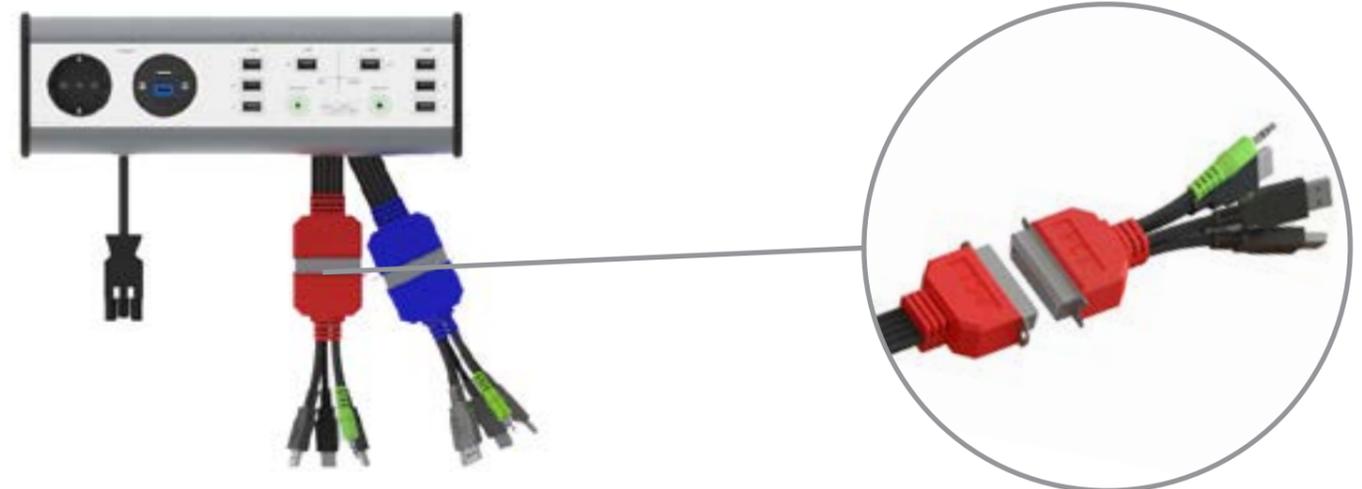

Technology Links.

Unique Connections.

Technology Links is our unique, fully customisable desktop connectivity solution. PC, power and data outlets are replicated at desktop level to enhance user access and speed up connectivity without the need to search awkwardly under the desk. Modules can be tailored to your specific project requirements.

All of our TL modules with PC outlet connections come with the option of 'Quick Connect' looms allowing PCs to be changed in seconds for rapid swap-out, moves and alterations.

'Simplicity' keyless locking technology enables a locker to be assigned to an individual when they come into the office, and unassigned again when they leave, with a simple red and green LED light system informing users when a locker is already occupied.

This 'hot-lockering' approach to storage significantly reduces the need for areas dedicated to personal storage within the building.

With Releezme your storage system is connected to the internet enabling users to easily find and access available lockers on their smartphone. This increases flexibility for both the user and facilities management.
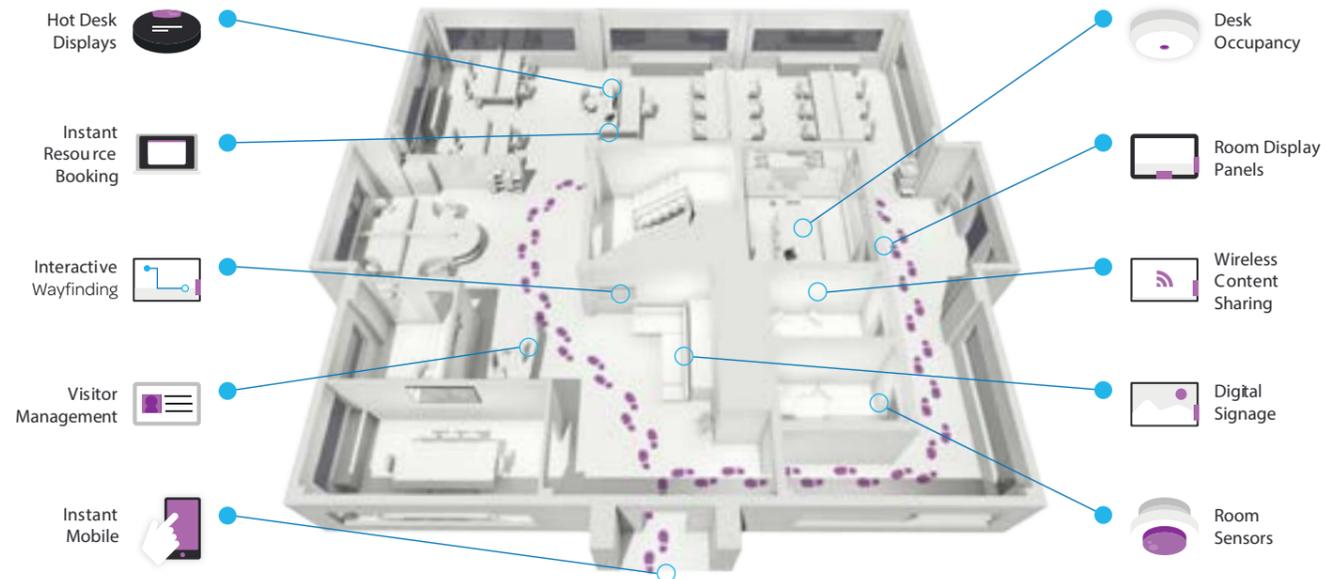

Smart Storage.

Flexible Working.
Reduced Storage.
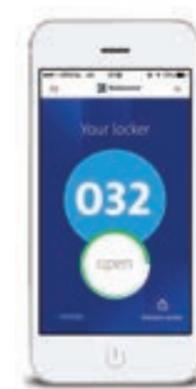

Integrated Technology.

Smart Office.
Smarter Working.

Aura's digital solutions are designed to work natively with commercial displays offering enhanced corporate messaging, streamlined communications and simplified broadcasting.

With room booking management and wireless casting technology, Intevi's solutions can integrate throughout your workplace incorporating features such as occupancy sensors to provide real time analytics and space optimisation to reduce overall costs.
